

LUXE TECHNOLOGY

The smart home partner your clients love.

A TRADE SPECIALIST FOR ARCHITECTS & DESIGNERS

We work alongside architects and interior designers from design stage through to completion — providing the drawings, site coordination, and technical expertise your projects require.

FOR ARCHITECTS & INTERIOR DESIGNERS

Technology that serves the design. Never competes with it.

The best smart home installations are the ones planned in from the start — not squeezed in at the end. We work alongside you from design stage, providing the drawings, specifications, and site coordination your project requires.

Your client receives a home where technology has disappeared into the architecture. You have a trusted specialist who makes your project easier to deliver — and a supplier your client will thank you for.

WHAT WE PROVIDE TO YOUR TEAM

- Room-by-room specifications and equipment schedules
- Itemised tender packages for your quantity surveyor
- Lighting design guidance and scene planning from the earliest stage
- Pre-design consultation
- First and second fix coordination with your main contractor
- A single named contact for the duration of the project
- Client-facing handover documentation

The right moment to involve us is at design stage — before floor plans are fixed and walls are closed. That said, we work at every stage and will always find the best solution for where your project is.

HOW WE WORK

A specialist built for design teams.

We built Luxe Technology to be the kind of company architects and designers can specify with complete confidence — considered, transparent, and still there long after handover.

We are technology-agnostic. Every system we specify is chosen purely on merit for the project — no manufacturer allegiances, no conflicts of interest.

CONSIDERATION

Every installation is designed to serve the interior. We engage at design stage so technology is planned in from the start — nothing retrofitted, nothing that compromises your scheme.

TRANSPARENCY

Clear quotes, honest timelines, and a named contact throughout. Your client always knows what is happening — and so do you. No surprises on site, no scope creep.

SIMPLICITY

Great technology is invisible. We handle every technical complexity so your clients simply enjoy a home that works — and you get a project that runs smoothly.

CONTINUITY

The relationship starts at handover. We stand behind every installation for the long term — protecting both your client and the reputation behind your recommendation.

Five services. One seamless installation.

Every system your clients need, specified together and installed as one.

01	02	03	04	05
SMART HOME CONTROL	SMART LIGHTING & BLINDS	MULTIROOM AUDIO	HOME CINEMA	SECURE NETWORKING
A single interface ties every system in your client's home together — lighting, blinds, heating, security, and entertainment.	Lutron-certified lighting and motorised blinds — designed in from the start to complement your interiors perfectly.	Whole-home music through hidden speakers — every streaming service, every room, total control. Heard but never seen.	Dedicated cinema rooms designed and built from scratch — 4K laser projection, Dolby Atmos, and acoustic treatment built into the walls.	Enterprise-grade Wi-Fi and structured cabling — the infrastructure foundation that all other systems depend on to perform.
— Whole-home scenes — App & voice control — Security integration	— Lutron certified — Pre-set scenes — Motorised blinds	— Sonos & high-end — Hidden speakers — Throughout the home	— 4K laser projection — Dolby Atmos — Bespoke seating	— Ubiquiti UniFi — Full-home Wi-Fi — Managed network

Products that work together seamlessly.

We specify and install control systems that bring every technology in your client's home together — lighting, heating, security, audio, and entertainment — working as one. The right products, chosen to integrate perfectly, controlled simply from a single app, panel, or voice command.

We are completely independent. We specify the right platform for each project — Savant, Control4, or Crestron — chosen purely on what is right for the home and the people living in it.

- Whole-home scenes at a single touch
- App and voice control for every family member
- Away / arrive / goodnight automation
- Security and alarm integration
- Savant, Control4 and Crestron certified

Light that sets the scene.

Lighting and motorised window treatments are a single design problem. We treat them that way — specifying them together as a unified system so every scene, every moment, and every room responds exactly as your design intends.

We are Lutron-certified installers. Keypads, dimmers, and motorised blinds are specified to complement your interior — available in a vast selection of finishes — and coordinated with your drawings from the earliest design stage.

LIGHTING CONTROL

- Lutron certified
- Pre-set scenes
- Astronomic lighting
- Keypad design service

MOTORISED BLINDS

- Roller & Roman motorised
- Linked to lighting scenes
- Whisper-quiet
- Solar shading

Music in every room. Cinema at home.

Multiroom audio transforms how your clients experience their home. The same music throughout, or different zones independently — through speakers built invisibly into walls and ceilings, painted to match the room, and heard rather than seen.

For clients who want more, we design and project-manage dedicated cinema rooms and music rooms — from first acoustic assessment to final commissioning, with every system specified precisely for the space.

MULTIROOM AUDIO

- Sonos & high-end systems
- Indoor and outdoor zones
- Invisible in-wall speakers
- One-tap scenes

HOME CINEMA

- 4K laser projection
- Dolby Atmos sound
- Acoustic treatment
- Bespoke seating

Infrastructure that performs. Aftercare that protects your work.

NETWORKING & IT

Every smart home runs on the network. We design and install structured cabling and enterprise-grade Wi-Fi — Ubiquiti UniFi, PoE switching, and full remote management — so every device performs from day one and beyond.

We also design in network segmentation from the start: smart devices, personal devices, and guest Wi-Fi on separate VLANs — properly secure, properly managed.

AFTERCARE & SUPPORT

Every system we install is backed by a structured support plan — remote monitoring, priority response, and annual servicing as standard. We remain available to your clients long after project completion.

Because the homes you design deserve the same standard of care after installation as they received before it — and so does your recommendation.

"Each member of our team has worked in the industry for over 20 years — thousands of projects, from country homes to penthouse apartments."

— LUXE TECHNOLOGY

Real projects. Real results.

We believe in one consistent approach to bring success — design the technology around the life being lived inside the home, not the other way around.

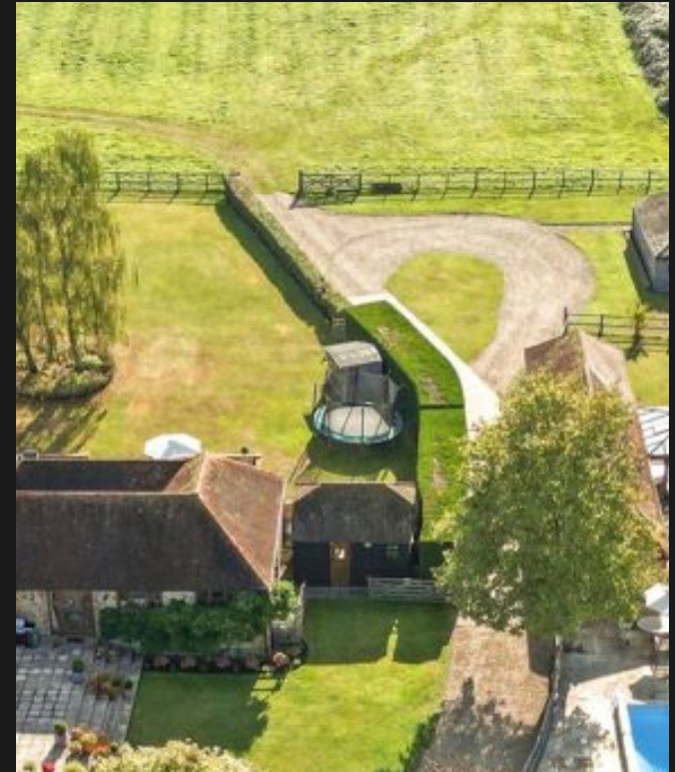

South of France Villa

Vallauris — full AV, lighting and climate across 8 zones.

Eaton Place, Belgravia

Grade II listed — discreet smart home, zero visible technology.

West Sussex Country House

Rural estate — cinema, audio, network and security.

The people behind every project.

Hasin Khan

SALES DIRECTOR

Hasin's career began in IT, building and maintaining large corporate networks where attention to detail is non-negotiable. That grounding led to a role at London's leading AV company. Working with highly demanding clients, Hasin was captivated by the industry — engaging hands-on with systems he had previously only imagined.

Will O'Neale

TECHNICAL DIRECTOR

Will's knowledge of hifi led him into the industry straight after university. Twenty years later, he's still here. Today Will specialises in system design, working closely with architects and interior designers to ensure technology is seamlessly integrated into the home from the earliest design stage.

Felix Oyortey

OPERATIONS DIRECTOR

Felix is an industry stalwart whose passion for high fidelity spans nearly four decades. In 2008 Felix moved into custom installation, coordinating scheduling, client liaison, and equipment sourcing to keep projects on time and to specification.

Questions architects ask us most.

WORKING WITH US

When is the right time to bring you in?

As early as possible — ideally at RIBA Stage 2, before floor plans are fixed. Early involvement means equipment rooms, conduit routes, and keypad positions are designed in from the outset, not squeezed in at the end.

What do you provide to our team?

Room-by-room equipment schedules, itemised tender packages for your QS, and full technical drawings. We also provide a dimensioned AV room layout at design stage — so nothing is a surprise on site.

How do you coordinate on site?

We work directly with the main contractor at first and second fix. A named contact is available throughout — the same person who attended the first design meeting is the one who commissions the system at the end.

TECHNOLOGY

Savant, Control4 or Crestron — which do you specify?

Savant is our first choice — refined interface, exceptional AV control, and deep Apple integration. Control4 for broader requirements. Crestron for the most technically complex or large-scale installations.

Why Lutron for lighting and blinds?

Lutron designs both lighting control and motorised window treatments as a single unified platform — flicker-free dimming, whisper-quiet motors, and keypads available in a vast range of finishes to suit any interior.

YOUR CLIENTS

Do you work directly with our clients during the project?

Yes, in full coordination with your team. We take our lead from you, communicate clearly with clients at every stage, and are always careful to support — never undermine — the wider design and project management team.

Will you present to clients at design stage?

Absolutely. We are comfortable presenting at client design meetings, providing demonstrations at reference installations, and preparing client-facing documentation in your preferred format.

Who does the client call after handover?

Us. We provide full handover documentation and training, and remain available under our aftercare programme — remote monitoring, priority response, and annual servicing as standard. Your clients are looked after long after the project completes.

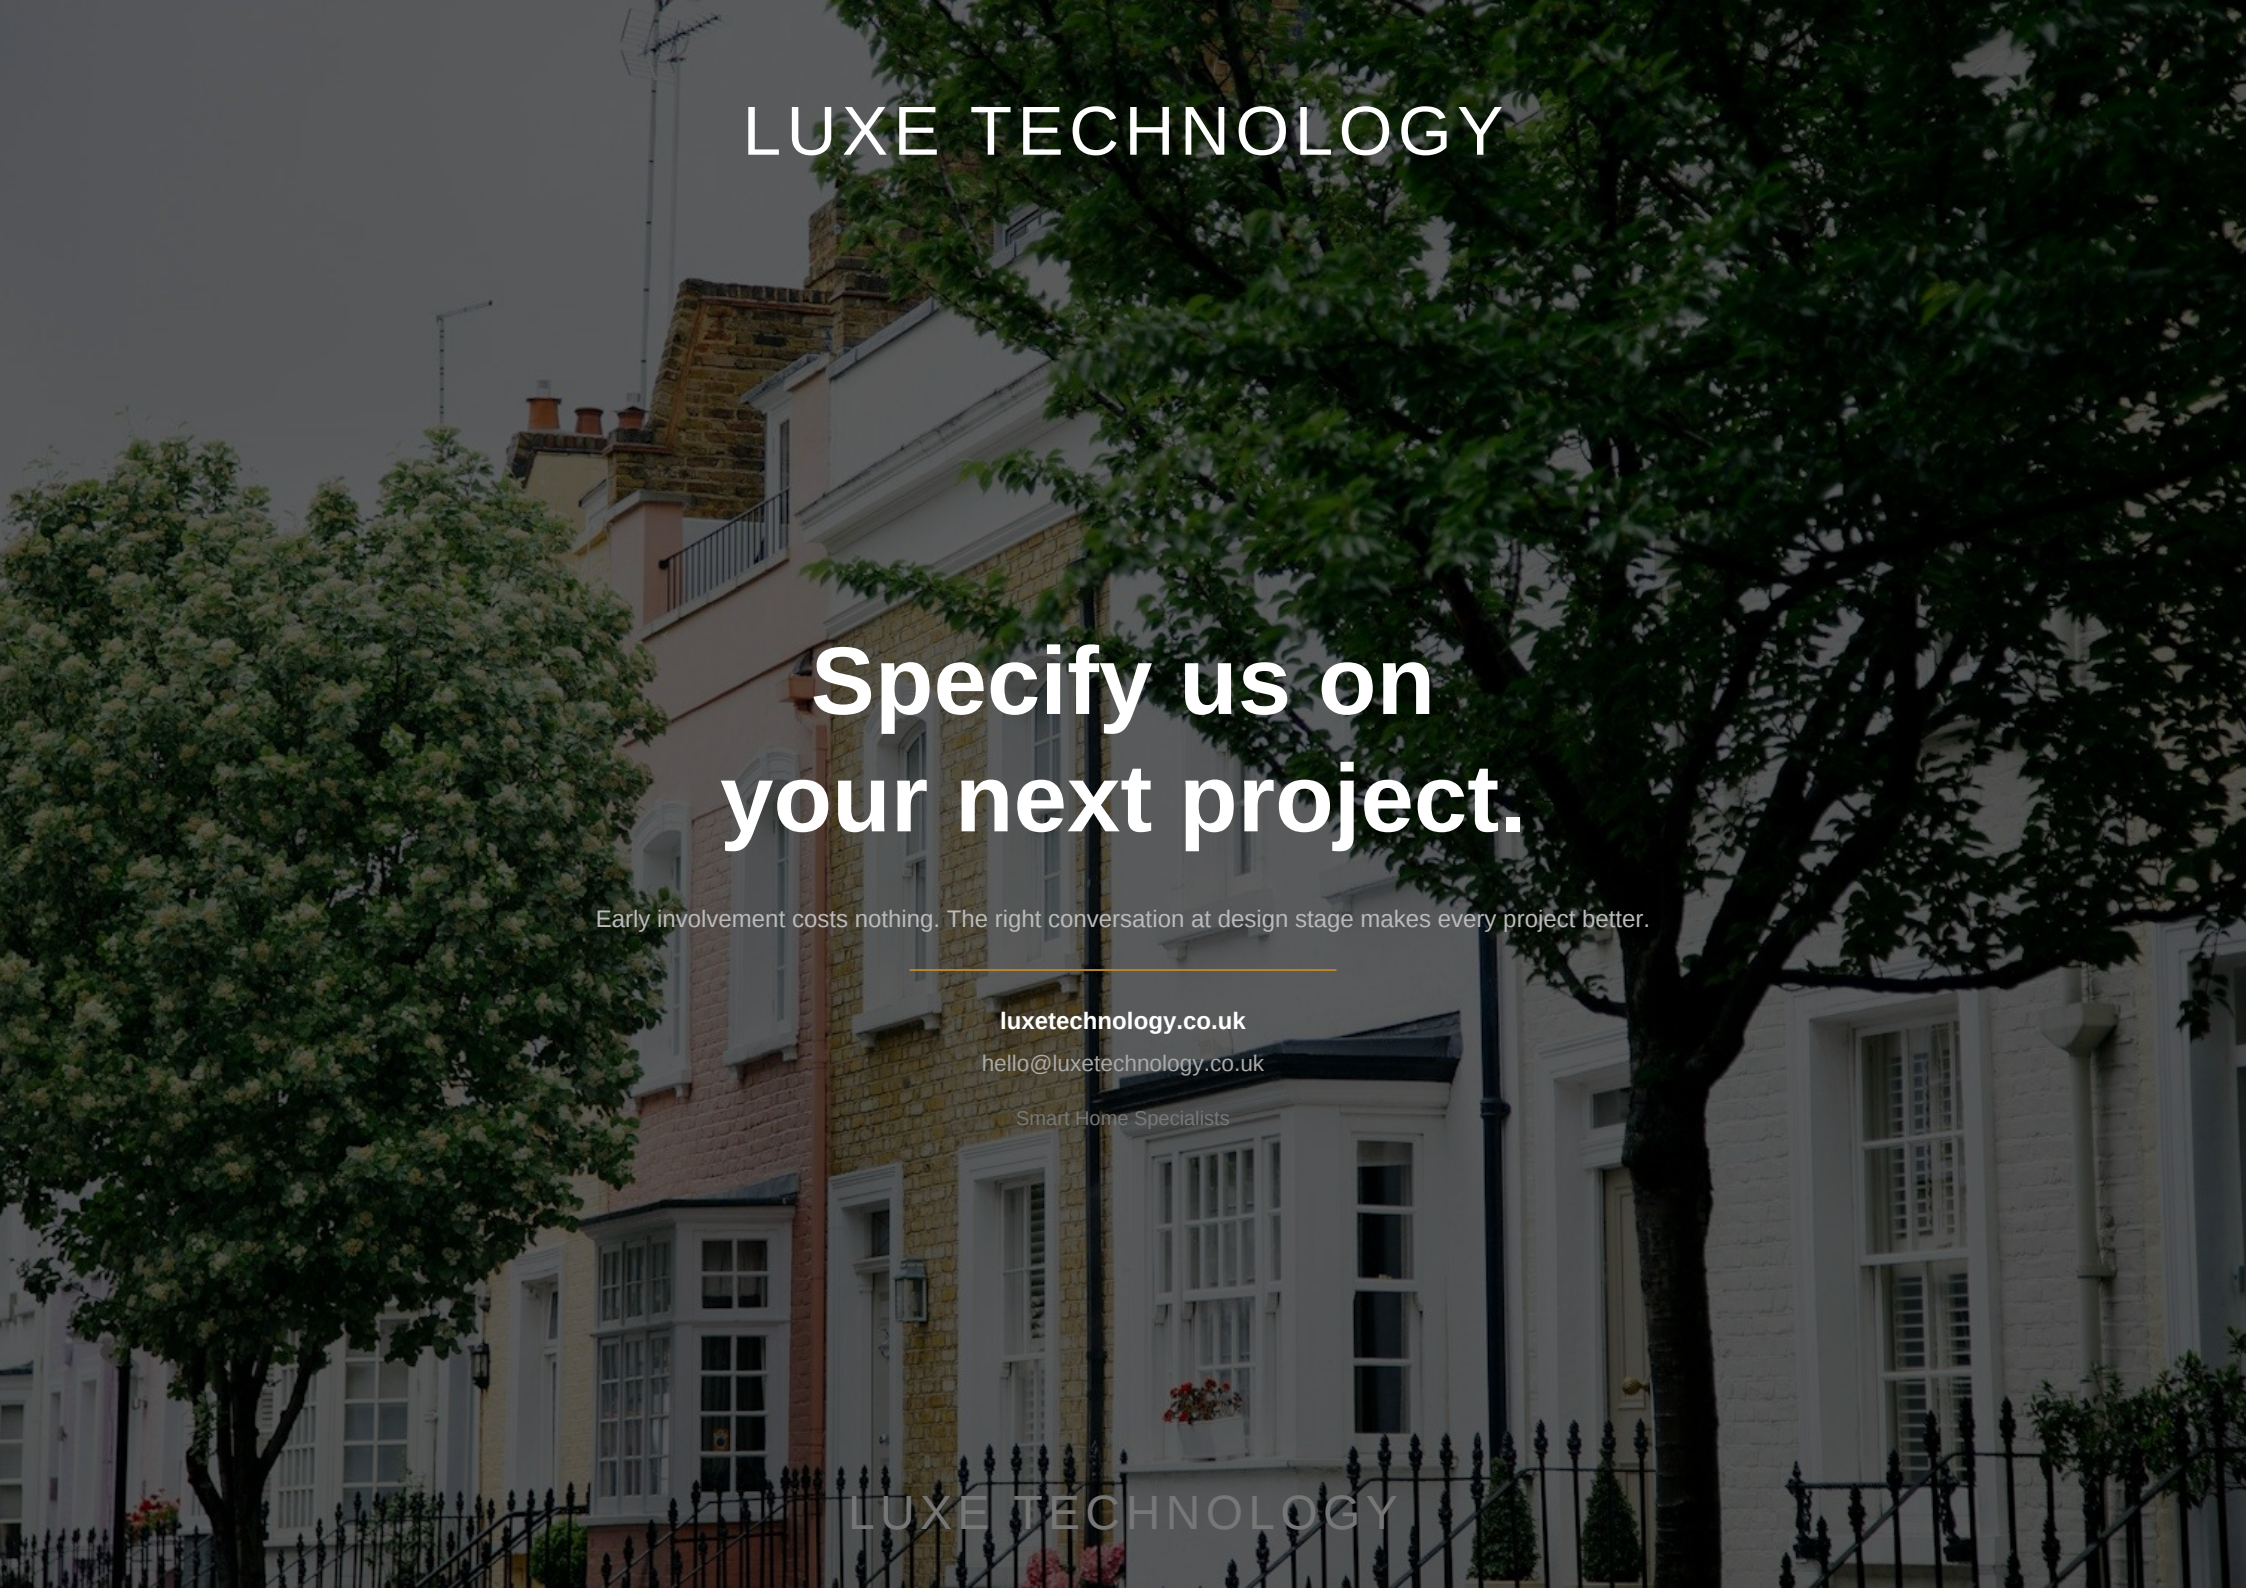

BUDGET & PROGRAMME

Can you give us a reliable budget number early?

Yes. Once we understand the scale and scope of the project, we can provide a detailed indicative cost — broken down by system — early enough to inform your client's decisions before commitments are made.

Can systems be expanded later?

Every system we specify is scalable. Savant, Control4, Lutron, and UniFi are all designed for future expansion, and we provision spare infrastructure capacity wherever possible.

A photograph of a row of colorful terraced houses (yellow, red, and white) with a large green tree in the foreground. The image is slightly darkened to make the white text stand out.

LUXE TECHNOLOGY

Specify us on your next project.

Early involvement costs nothing. The right conversation at design stage makes every project better.
